

TALL GRASS PRAIRIE Beef Mineral Program

Tall Grass Dry Cow Maintain

Features: Designed to supplement mineral needs of brood cows and stocker calves post weaning. Ideal conditions for this mineral are when cattle are grazing crop residues and when cows are in the 2nd and early 3rd trimesters of pregnancy. Consumption for optimal performance is 4 oz per head per day.

Tall Grass Pre-Calving Organic

Features: Designed to aid close up cows to develop quality colostrum for newborn calves. Organic trace minerals and Vitamin E is added to assist in developing good immune response for both Cow and Calf. 4oz consumption per head per day is ideal for optimum performance.

Tall Grass Breeder/Lac Mag

Features: Designed to feed to cattle 30 to 60 days prior to pasturing on lush green grasses to prevent grass tetany. Also designed to meet mineral nutrient demand of cows during peak lactation and re-breeding.

Tall Grass Stocker Power C-2800

Features: Designed to supplement minerals, vitamins, and trace minerals to stocker calves on summer pasture and early fall crop residue. Contains Aureomycin (trademark)

Indications: For the control of active infection of anaplasmosis caused by Anaplasma marginale susceptible to chlortetracycline
