

75 FLUID™

TRACTOR HYDRAULIC, TRANSMISSION AND WET BRAKE FLUID

75 Fluid offers protection for hydraulic pumps in agriculture, off-highway, construction and forestry equipment. Critical bronze alloy parts require the unique protection that 75 Fluid provides. Other tractor hydraulic transmission fluids (THFs) can corrode copper in the pumps, causing loss of critical tolerances, metal fatigue, reduced pump output and hydraulic system failure.

75 Fluid exceeds current manufacturer's transmission/differential and hydraulic performance requirements including J20C.

The viscosity of 75 Fluid makes it the ideal fluid for use in all ambient conditions for this region.

- Reduces gear wear.
- Prevents brake chatter.
- Provides excellent seal protection.
- Excellent oxidation control.
- 75 Fluid is recommended for tractors that have common sump for transmission/differential and hydraulic systems, where intermixing may occur due to implement attachment.

SPECIFICATIONS	75 FLUID
Color	Green
Approximate SAE Viscosity	10W-30

Avoid costly downtime with routine maintenance on your hydraulic systems. Change tractor hydraulic fluids at manufacturer-specified intervals or yearly.
